

Worksheet 9

To accompany Chapter 4.1 Trigonometric Fourier Series

We will step through this worksheet in class.

You are expected to have at least watched the video presentation of [Chapter 4.1](https://cpjobling.github.io/eg-247-textbook/fourier_series/1/trig_fseries) (https://cpjobling.github.io/eg-247-textbook/fourier_series/1/trig_fseries) of the [notes](https://cpjobling.github.io/eg-247-textbook) (<https://cpjobling.github.io/eg-247-textbook>) before coming to class. If you haven't watch it afterwards!

Motivating Example

In the class I will demonstrate the Fourier Series demo (see [Notes \(trig_fs\)](#)).

Symmetry in Trigonometric Fourier Series

There are simplifications we can make if the original periodic properties has certain properties:

- If $f(t)$ is odd, $a_0 = 0$ and there will be no cosine terms so $a_n = 0 \forall n > 0$
- If $f(t)$ is even, there will be no sine terms and $b_n = 0 \forall n > 0$. The DC may or may not be zero.
- If $f(t)$ has *half-wave symmetry* only the odd harmonics will be present. That is a_n and b_n is zero for all even values of n (0, 2, 4, ...)

Odd, Even and Half-wave Symmetry

Recall

- An *odd* function is one for which $f(t) = -f(-t)$. The function $\sin t$ is an *odd* function.
- An *even* function is one for which $f(t) = f(-t)$. The function $\cos t$ is an *even* function.

Half-wave symmetry

- A periodic function with period T is a function for which $f(t) = f(t + T)$
- A periodic function with period T , has *half-wave symmetry* if $f(t) = -f(t + T/2)$

Symmetry in Common Waveforms

To reproduce the following waveforms (without annotation) publish the script [waves.m](https://www.waves.m) ([waves.m](https://www.waves.m)).

Squarewave

- Average value over period T is ...?
- It is an **odd/even** function?
- It **has/has not** half-wave symmetry $f(t) = -f(t + T/2)$?

Shifted Squarewave

- Average value over period T is
- It is an **odd/even** function?
- It **has/has not** half-wave symmetry $f(t) = -f(t + T/2)$?

Sawtooth

- Average value over period T is
- It is an **odd/even** function?
- It **has/has not** half-wave symmetry $f(t) = -f(t + T/2)$?

Triangle

- Average value over period T is
- It is an **odd/even** function?
- It **has/has not** half-wave symmetry $f(t) = -f(t + T/2)$?

Symmetry in fundamental, Second and Third Harmonics

In the following, $T/2$ is taken to be the half-period of the fundamental sinewave.

Fundamental

- Average value over period T is
- It is an **odd/even** function?
- It **has/has not** half-wave symmetry $f(t) = -f(t + T/2)$?

Second Harmonic

- Average value over period T is
- It is an **odd/even** function?
- It **has/has not** half-wave symmetry $f(t) = -f(t + T/2)$?

Third Harmonic

- Average value over period T is
- It is an **odd/even** function?
- It **has/has not** half-wave symmetry $f(t) = -f(t + T/2)$?

Some simplifications that result from symmetry

- The limits of the integrals used to compute the coefficients a_n and b_n of the Fourier series are given as $0 \rightarrow 2\pi$ which is one period T
- We could also choose to integrate from $-\pi \rightarrow \pi$
- If the function is *odd*, or *even* or has *half-wave symmetry* we can compute a_n and b_n by integrating from $0 \rightarrow \pi$ and multiplying by 2.
- If we have *half-wave symmetry* we can compute a_n and b_n by integrating from $0 \rightarrow \pi/2$ and multiplying by 4.

(For more details see page 7-10 of the textbook)

Computing coefficients of Trig. Fourier Series in Matlab

As an example let's take a square wave with amplitude $\pm A$ and period T .

Solution

Solution: See [square_ftrig.mlx \(square_ftrig.mlx\)](#). Script confirms that:

- $a_0 = 0$
- $a_i = 0$: function is odd
- $b_i = 0$: for i even - half-wave symmetry

ft =

```
(4*A*sin(t))/pi + (4*A*sin(3*t))/(3*pi) + (4*A*sin(5*t))/(5*pi) + (4*A*
sin(7*t))/(7*pi) + (4*A*sin(9*t))/(9*pi) + (4*A*sin(11*t))/(11*pi)
```

Note that the coefficients match those given in the textbook (Section 7.4.1).

$$f(t) = \frac{4A}{\pi} \left(\sin \Omega_0 t + \frac{1}{3} \sin 3\Omega_0 t + \frac{1}{5} \sin 5\Omega_0 t + \dots \right) = \frac{4A}{\pi} \sum_{n=\text{odd}} \frac{1}{n} \sin n\Omega_0 t$$

Using symmetry - computing the Fourier series coefficients of the shifted square wave

- As before $a_0 = 0$
- We observe that this function is even, so all b_k coefficients will be zero
- The waveform has half-wave symmetry, so only odd indexed coefficients will be present.
- Further more, because it has half-wave symmetry we can just integrate from $0 \rightarrow \pi/2$ and multiply the result by 4.

See [shifted_sq_ftrig.mlx](#) ([shifted_sq_ftrig.mlx](#)).

ft =

$$(4A \cos(t))/\pi - (4A \cos(3t))/(3\pi) + (4A \cos(5t))/(5\pi) - (4A \cos(7t))/(7\pi) + (4A \cos(9t))/(9\pi) - (4A \cos(11t))/(11\pi)$$

Note that the coefficients match those given in the textbook (Section 7.4.2).

$$f(t) = \frac{4A}{\pi} \left(\cos \Omega_0 t - \frac{1}{3} \cos 3\Omega_0 t + \frac{1}{5} \cos 5\Omega_0 t - \dots \right) = \frac{4A}{\pi} \sum_{n=\text{odd}} (-1)^{\frac{n-1}{2}} \frac{1}{n} \cos n\Omega_0 t$$
