## **Worksheet 4**

#### To accompany Chapter 3.1 Laplace Transform

#### Colophon

This worksheet can be downloaded as a PDF file. We will step through this worksheet in class. A printout of this worksheet will be distributed before the second class meeting in the Week 2: Classroom Activities section of

the Canvas site. I will also distribute a copy to your personal Worksheets section of the OneNote Class Notebook so that you can add your own notes using OneNote. You are expected to have at least watched the video presentation of Chapter 3.1 of the notes before coming to class. If you

haven't watch it afterwards! After class, the lecture recording and the annotated version of this worksheet will be made available to you via OneNote and

through Canvas. First hour quiz: The Laplace and inverse Laplace transforms

This will be a group activity. If you did the quiz in Canvas before class you will be in a good place to get these answers.

**Question 1: The Laplace Transform** 

Without looking it up, which of these integrals represents the Laplace and Inverse laplace transforms?

# C. $\int_{-\infty}^{t} f(\tau) g(t-\tau) d\tau \quad D. \int_{-j\omega}^{+j\omega} f(t) e^{-j\omega t} dt$

A.  $\frac{1}{2\pi j} \int_{\sigma - j\omega}^{\sigma + j\omega} F(s) e^{st} ds$  B.  $\int_{0}^{\infty} f(t) e^{-st} dt$ 

Bonus: what are the other two integrals? **Question 2: Laplace transforms** 

 $\int_{-\infty}^{t} f(\tau) d\tau \qquad \text{A.} \quad \frac{F(s)}{s} + \frac{f(0^{-})}{s}$ 

1.

2.

3.

2.  $\lim_{t \to 0} f(t)$  B.  $sF(s) - f(0^{-})$ 3.  $\int_{0}^{t} f_{1}(\tau)f_{2}(t-\tau) d\tau$  C.  $\frac{\int_{0}^{T} f(t) e^{-sT}}{1-e^{-sT}}$ 

4. 
$$\frac{d}{dt} f(t)$$
 D.  $F_1(s) F_2(s)$ 

5.  $f(t+nT)$  E.  $\lim_{s\to\infty} sF(s)$ 

Question 3: Properties of Laplace transforms

Match each of these mathematical properties to the associated Laplace transform property.

1. Linearity A.  $f(t-a) u_0(t-a) \Leftrightarrow e^{-as} F(s)$ 

2. Time Scaling B.  $c_1 f_1(t) + c_2 f_2(t) + \dots + c_n f_n(t) \Leftrightarrow c_1 F_1(s) + c_2 F_2(s) + \dots + c_n F_n(s)$ 

3. Time-shift C.  $e^{-at} f(t) \Leftrightarrow F(s+a)$ 

 $f(at) \Leftrightarrow (1/a) F(s/a)$ 

## **Question 4: Name that property**

4. Frequency Shift D.

What property is this?

	$\lim_{t\to\infty} f(t) \Leftrightarrow \lim_{s\to 0} sF(s)$
A. Convolution in the time domain	
B. Initial value theorem	
C. Final value theorem	

 $\delta(t)$ 

 $u_0(t)$ 

 $u_1(t) = tu_0(t)$ 

Damped sinusoid  $e^{-at} \sin(\omega t)u_0(t)$  E.

Sampling function  $\delta(t-a)$  F.

Write your answers in the chat or add to the programmed 2 Questions and Discussion on the Laplace Transformation and its

 $e^{-at}u_0(t)$ 

Gating function  $u_0(t) - u_0(t-a)$  G.  $\frac{\omega}{(s+a)^2 + \omega^2}$ 

## E. Integration in the time domain

D. Differentiation in the time domain

**Question 5: Elementary signals** Match the elementary signal to its Laplace transform

2.

3.

4.

5.

1. Dirac delta (unit impulse)

Unit step

Unit ramp

Exponential decay

**End of first hour quiz** 

Pulse

• Linear segment

• Triangular waveform

• Half rectified sine wave

#### 6. 7.

Applications board in Canvas after class. Laplace transforms of common waveforms

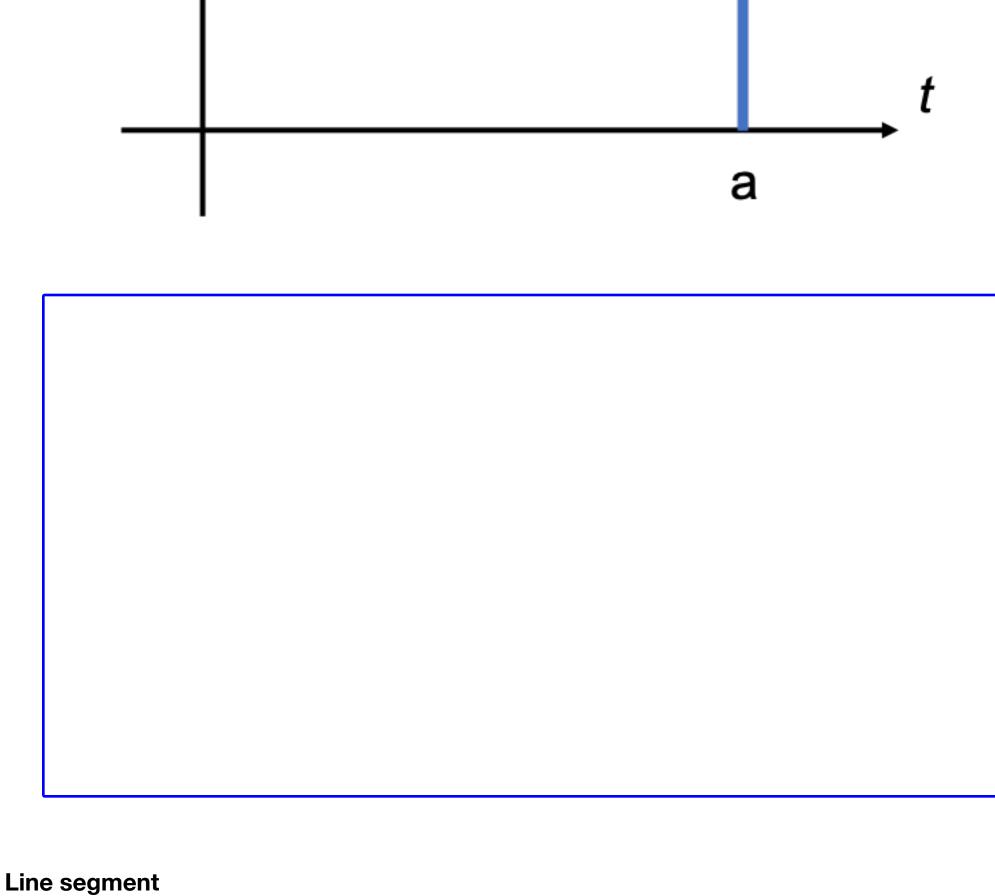

We will work through a few of the following on the board in class

• Rectangular periodic waveform (square wave)

Is there anything in this quiz that you think we should go over in more detail in class?

**Pulse** 

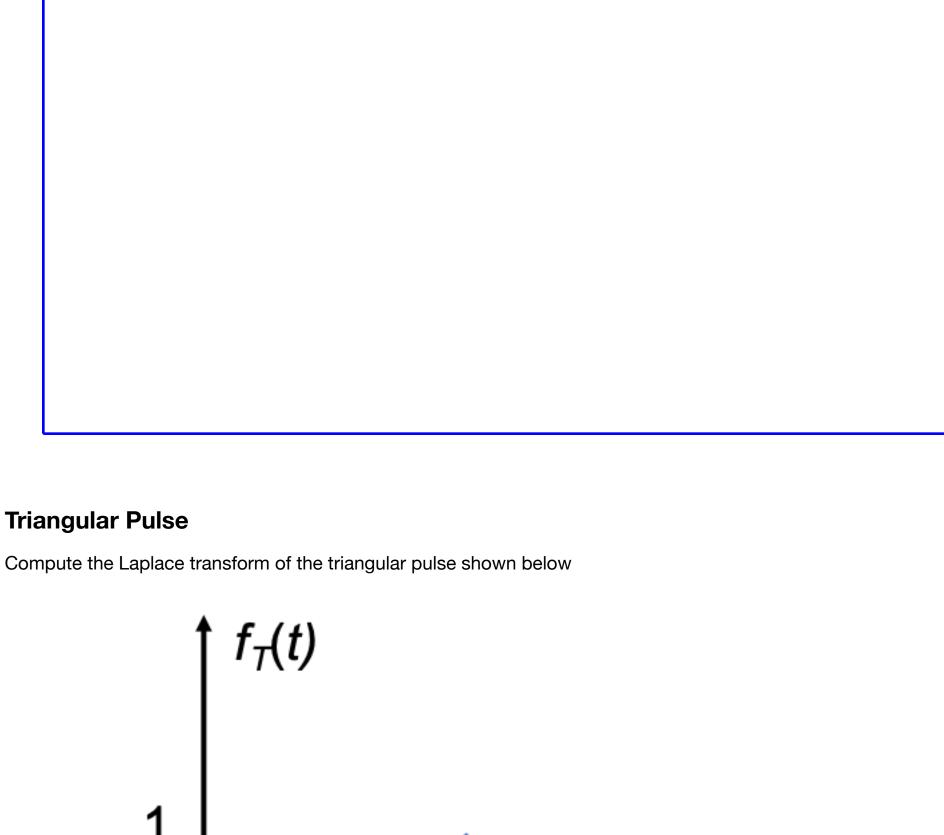

# Compute the Laplace transform of the pulse shown in the figure.

## 

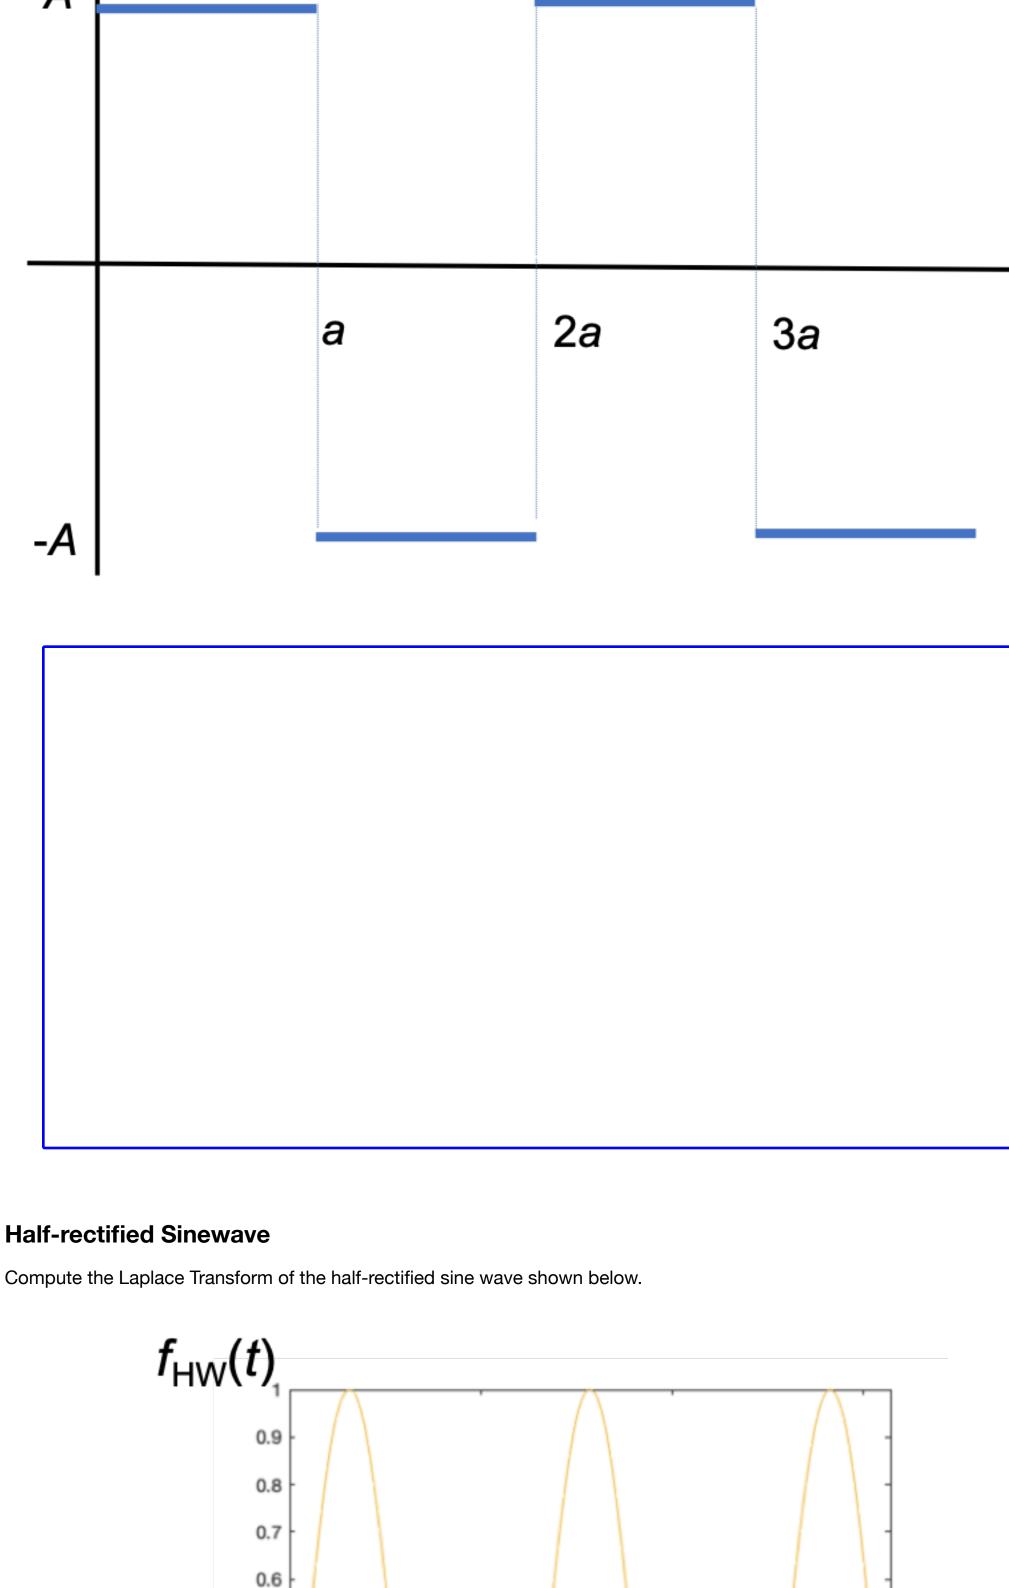

Compute the Laplace transform of the line segment shown below.

 $f_L(t)$ 

### **Square Wave** Compute the Laplace transform of the periodic function shown below.

 $f_R(t)$ 

 $2\pi$ 

 $3\pi$ 

15

 $4\pi$ 

0.5

0.4

0.3

0.2

0.1

0

Attempt at least one of the end-of-chapter exercises from each question 1-7 of Section 2.7 of (cite) karris. Don't look at the answers until you have attempted the problems. If we have time, I will work through one or two of these in class.

**Homework**
